## DEVELOPMENT ACT 1993: SECTION 48

### *Decision by the Governor*

#### *Preamble*

1. The decision of the Governor under Section 48 of the Development Act 1993, to approve the development of the solid waste landfill (Northward Fill Landfill Depot) at Inkerman, was published in the *South Australian Government Gazette* on 21 January 1999.

2. The proposal has been the subject of an Environmental Impact Statement and an Assessment Report under Section 46 and 46B of the Development Act 1993.

3. The development was the subject of further applications to amend the development authorisation, and associated amendments to the Environmental Impact Statement were made under Section 47 of the Development Act 1993.

4. On 17 June 2004, 14 October 2004, 13 April 2006, 20 September 2007 and 5 June 2008 the Development Assessment Commission, as delegate of the Governor under Section 48 of the Development Act 1993, granted approval for variations to the development authorisation.

5. On 20 August 2009 the Governor approved an amendment to the development authorisation to allow the receipt of low level contaminated waste at the approved landfill and disposal of these wastes into cells that are separate from those currently used to dispose of solid wastes. The amendment was the subject of an Amended Environmental Impact Statement and an Amendment to the Assessment Report under Section 47 of the Development Act 1993.

6. On 4 March 2010 the Development Assessment Commission, as delegate of the Governor under Section 48 of the Development Act 1993, granted approval for a variation to the development authorisation for the receipt and disposal of non-metropolitan construction and demolition waste that is not required to go through a waste recovery and waste transfer facility; and an updated design of the liner system for low level contaminated waste cells.

7. On 7 October 2011 the Transpacific Industries Group Ltd, the company now having the benefit of the development authorisation, applied for a variation to the development authorisation comprising a modification to the design of the existing maintenance shed.

8. The Development Assessment Commission is satisfied that the proposed variation does not require the preparation of a further or amended Environmental Impact Statement.

9. The Development Assessment Commission has, in considering the applications for a variation of the development authorisation, had regard to all relevant matters under Section 48 (5) of the Development Act 1993.

10. For ease of reference, the Development Assessment Commission has decided to revoke all conditions and substitute therefore the conditions contained herein. Requirements that pertain to the variation have been added to Condition 1.

#### *Decision*

PURSUANT to Section 48 of the Development Act 1993, the Development Assessment Commission, as delegate of the Governor:

(a) vary the provisional development authorisation granted to the Transpacific Industries Group Ltd on 21 January 1999 and varied on 17 June 2004, 14 October 2004, 13 April 2006, 20 September 2007, 5 June 2008, 20 August 2009 and 4 March 2010 by:

(i) revoking all conditions of approval attached to the provisional development authorisation published in the *South Australian Government Gazette* on 4 March 2010;

(ii) attaching the conditions of approval set out in this notice below; and

(iii) revoking the period specified for the purposes of Section 48 (11) (b) by notice in the *South Australian Government Gazette* on 4 March 2010 and specifying for the purposes of Section 48 (11) (b) the period of two years from the date hereof, as the time within which substantial work must be commenced on site, failing which I may cancel this authorisation;

13. All perimeter plantings shall be started as early as practicable after the date of this approval to achieve maximum amelioration of visual impacts.

14. Screening by suitable plantings where adequate natural screening is not provided, shall be provided for the perimeter fence, all built structures, stockpiles and internal roads (where practicable) using suitable species in accordance with the Vegetation Management and Revegetation Plan proposed as part of the Landfill Environmental Management Plan (LEMP).

21. The proponent may receive and dispose of wastes from different regions as follows:

- (a) waste from the Adelaide Metropolitan Area that has gone through a Resource Recovery and Waste Transfer Facility; or
- (b) waste from regional areas outside the Metropolitan area that:
  - has been through a kerbside recycling service comprising at least 2 mobile garbage bins with a maximum 140 litre weekly waste collection and a minimum 240 litre fortnightly recycling collection;

The Wakefield Regional Council or private certifier undertaking Building Rules assessments must ensure that the assessment and certification are consistent with this development authorisation (including its Conditions and Notes).

#### *EPA Licensing and General Environmental Duty of Care*

- The applicant is reminded of its general environmental duty, as required by Section 25 of the Environment Protection Act 1993, to take all reasonable and practical measures to ensure that the activities on the whole site, including during both construction and operation, do not pollute the environment in a way which causes or may cause environmental harm.
- Environmental authorisation in the form of an amended licence may be required for the construction and/or operation of this development. The applicant is advised to contact the Environment Protection Authority before acting on this approval to ascertain licensing requirements.
- The Environment Protection Authority will require the proponent to review and amend where necessary the current Landfill Environmental Management Plan (LEMP) to satisfy the Authority's licensing requirements. Such a plan will be required to include provisions for the review, from time to time, of waste treatment and disposal methods to facilitate implementation of continuous improvement programs. The LEMP will be required to incorporate specific plans in relation to groundwater, leachate and surface water management. It will also be required to include provisions for implementation of corrective actions in the event of any failure of the leachate and groundwater management systems.
- Control over the types of waste to be received at the site will be exercised by the Environment Protection Authority. This will be done through conditions of environmental authorisation or requirements under a relevant Environment Protection Policy rather than through conditions of development authorisation.
- It is likely that as a condition of such a license the Environment Protection Authority will require the licensee to carry out specified environmental monitoring of air and water quality and to make reports of the results of such monitoring to it.
- A financial assurance in accordance with the provisions of Section 51 of the Environment Protection Act 1993 will be required by the Environment Protection Authority as a condition of license.
- In regard to Conditions of Development Authorisation 3-5, a Geosynthetic Clay Liner may be used in the construction of a liner for a low level contaminated waste cell (such as in place of an upper 600 mm compacted clay liner) provided it has a specification equivalent to ELCOSEAL X3000 made by Geofabrics Australia or its equivalent.

### **PURPOSE:**

This document establishes the energy efficiency activities which a relevant electricity retailer or relevant gas retailer may choose to implement in residential premises for the purposes of achieving its Greenhouse Gas Reduction Target (EGRT or GGRT) and/or Priority Group Greenhouse Reduction Target (PGGGRT) under the Residential Energy Efficiency Scheme (REES).

These activities have been established by the Essential Services Commission of South Australia (ESCOSA) by Notice in the Government Gazette in accordance with sub-regulation 7AN(1) of Part 2AA *Electricity (General) Regulations 1997* under the *Electricity Act 1996*, and sub-regulation 8DK(1) of Part 2AA *Gas Regulations 1997* under the *Gas Act 1997*.

3. The replacement of an inefficient showerhead must involve the installing of the efficient showerhead in place of the inefficient showerhead.
4. The installation of an efficient showerhead must not be otherwise required by law, for example as condition of a development approval under the Development Act 1993 or in compliance with requirements under the Waterworks Act 1932.
5. An efficient showerhead which is installed must be tested to ensure it is correctly installed, does not leak, and is operating correctly at a typical showering temperature.
6. An efficient showerhead must not be installed where it would be incompatible with the operation of the hot water service currently installed. Where a replaced showerhead causes the hot water system to no longer operate (i.e. fails to heat water to a standard temperature), the installer must either reinstall the original showerhead at the request of the householder, or install a new showerhead of equivalent flow rate and quality of the original showerhead (where available), where such a request is made within 5 business days of the installation of the efficient showerhead.
7. An inefficient showerhead which is replaced must be removed from the premises.
8. The person undertaking this activity in a residential customer's premises must satisfy the REES Code mandatory safety training requirements. Registered Plumbers, Gas Fitters, Electricians and Building Work Supervisors are exempt from this requirement.

**Deemed value:** The carbon dioxide (CO<sub>2</sub>) equivalents (tonnes) to be attributed to each efficient showerhead installation activity is:

**Guidance notes (not mandatory):**

- *The flow rate of a showerhead should be measured with a simple bucket test with the water running at a typical showering temperature. Hold a bucket under the running shower for 15 seconds. Measure the quantity of water captured and multiply by 4 to ascertain the per minute flow rate.*
- *Efficient showerheads are typically not compatible with gravity-fed water heaters (most already have low flow rates). They may also not be compatible with older instantaneous gas water heaters (reduced flow can interfere with the water heater operations).*
- *All reasonable endeavours should be used to recycle removed showerheads.*

2. The installation of insulation must not be otherwise required by law, for example as a condition of a development approval under the Development Act 1993.
3. The insulation product must achieve a minimum R-value of 3.5 when measured in accordance with AS/NZS 4859.1:2002.

  - a. into the premises from the outside; or
  - b. between adjoining internal spaces, one of which is not mechanically or actively heated and/or cooled; or
  - c. between two adjoining internal spaces which are independently mechanically or actively heated and/or cooled.

**Deemed value:** The carbon dioxide (CO<sub>2</sub>) equivalents (tonnes) attributed to a high efficiency pool pump is determined by using the value derived from applying the following formulae to assign the appropriate class for the pool pump:

Formulae

Deemed value =  $0.00003 * Q * (1,622 - PAEC) * 0.9$

Where:

Q = flow rate in litres/minute of the pump

PAEC (Projected Annual Energy Consumption) =  $18,250 / \{9 * \text{Exp}[\text{Loge}(1.25) * (SRI - 1)]\}$

SRI = star rated index of the high efficiency pump being installed.
