ROAD TRAFFIC ACT 1961

Measurement of Stationary Noise Levels

PURSUANT to Regulation 153 of the Road Traffic (Vehicle Standards) Rules 1999 (“the Rules”), I, Andrew Keightley, as an authorised delegate of the Minister for Transport and Urban Planning, hereby approve the following test method for measurement of stationary noise levels for motor vehicles for the purposes of Part 10, Division 3 of the Rules:

1. Definitions

- 1.1 “Diesel Engine” means an internal combustion engine which operates on the compression-ignition principle.
- 1.2 “Engine Speed at Maximum Power” (“ESMP”) means the speed at which the engine develops maximum power (r/min).
- 1.3 “Spark Ignition” means positive ignition.
- 1.4 “Motor Cycle” means motorcycle or moped

2. Measuring Instruments

- 2.1 A sound level meter of high precision complying at least with the specifications of Publication No. 651 (1979) - “Precision sound level meters” of the International Electrotechnical Commission (IEC), or Type 1 of Australian Standard 1259.1-1990 - “Sound Level Meters”, concerning the characteristics of sound level meters, shall be used. Measurements shall be carried out using frequency weighting “A” and time weighting “F”.
- 2.2 The sound level meter shall be calibrated against an acoustic calibrator immediately before and after each series of test runs. If the meter readings obtained from these calibrations differ by more than 1dB(A) the test shall be considered invalid.
- 2.3 The rotational speed of the engine shall be measured by an external tachometer whose accuracy is within 3 per cent or, where an external tachometer cannot reasonably be used, the vehicle’s tachometer.

3. Test Site Ambient Requirements

- 3.1 The measurements shall be made in the open air where both the ambient and wind noise levels are at least 10dB(A) below the noise level being measured.

The site may take the form of an open space or beneath a canopy if no part of the canopy or its supports is within 3 metres of the microphone being used in the test.

The test site within 3 metres of the microphone(s) must be substantially flat and may include kerbs, channels, gutter, poles or other objects not providing excessive acoustic reflection provided that no such object is within 1 metre of the microphone.

- 3.2 Measurements shall not be made under adverse weather conditions. Any sound peak which appears to be unrelated to the characteristics of the vehicle shall be ignored in taking the readings. If a windscreen is used, its influence on the sensitivity and the directional characteristics of the microphone shall be taken into account.
- 3.3 Whilst testing is in progress no person other than any occupants of the vehicle or, in the case of a motor cycle, the rider, shall be within 1 m of the microphone in use. No person or object other than the person conducting the test and an observer or the objects necessary for the performance of the test shall be within 3 m of the microphone in use.
- 3.4 Before the measurements are begun, the testing officer shall ensure that the engine of the vehicle under test is sufficiently warm to allow the noise testing to be carried out.

4. Test Method for Passenger Cars and Derivatives

4.1 Microphone position

- 4.1.1 The microphone shall be directed towards the orifice of the exhaust outlet and shall be supported by a tripod or similar device not providing excessive acoustic reflection. The general requirements for positioning microphones are shown in Figure 1.
- 4.1.2 The nominal axis of maximum sensitivity of the microphone shall be substantially parallel to the test site surface and shall make an angle of 45 degrees \pm 10 degrees with the principal direction of gas flow from the exhaust.
- 4.1.3 In selecting the 45 degree alignment from the outlet of a motor vehicle fitted with two or more outlets, only the angle resulting in the microphone being farthest from any other outlet must be used.
- 4.1.4 The height of the microphone above the test site surface shall be equal to that of the orifice of the exhaust outlet \pm 25 mm but shall not be less than 200 mm above the test site surface.
- 4.1.5 The distance of the microphone from the exhaust outlet orifice shall be 525 mm \pm 25 mm.
- 4.1.6 For vehicles fitted with one exhaust outlet the microphone shall be placed so that the greatest possible distance is achieved between it and the vehicle within the configuration shown on Figure 1.
- 4.1.7 For vehicles fitted with two or more exhaust outlets spaced less than 500 mm apart and connected to a single silencer only one microphone position shall be used. That position shall be selected in accordance with the procedure described in the preceding paragraphs in respect of an exhaust outlet which results in the greatest possible distance from the vehicle.
- 4.1.8 For vehicles fitted with two or more exhaust outlets connected to separate silencers or spaced more than 500 mm apart, each exhaust outlet shall be treated separately as if it were the only one.

4.1.9 Notwithstanding anything to the contrary in the preceding paragraphs if the microphone positioning procedures result in no suitable position due to an obstruction being part of the vehicle or in an obstruction being directly between the microphone and the exhaust outlet, the requirements of paragraphs 4.1.2 and 4.1.3 may be varied.

4.1.10 Despite the preceding paragraphs if the microphone is to be placed so that it is less than 500 mm from the engine then the angle between the direction of gas flow and the angle of the nominal maximum sensitivity of the microphone may be altered so that the microphone is more than 500 mm from the engine.

4.2 Vehicle operation and noise measurement

4.2.1 The vehicle shall be stationary with the transmission in "neutral" or, in the case of a vehicle with automatic transmission, with the gear selector in the "park" position if such a position is provided.

4.2.2 The engine of the vehicle under test shall be operated in accordance with one of the following procedures:

4.2.2.1 Where the ESMP for that engine has been determined by the testing authority the engine shall be brought to and stabilised at a speed as close to $\frac{3}{4}$ ESMP as the testing officer can achieve; or

4.2.2.2 Where the ESMP for that engine has not been determined by the testing authority then the engine shall be brought to and stabilised at a speed as close as the testing officer can achieve to one of the following speeds:

If the engine has:

(i)	5 cylinders or less	4 000 rpm
(ii)	6 cylinders	3 200 rpm
(iii)	8 cylinders	3 300 rpm
(iv)	more than 8 cylinders	4 300 rpm
(v)	If the engine is a rotary engine	4 500 rpm

OR

4.2.2.3 Where, in the opinion of the testing officer, the test speed determined by reference to the above is not attainable by the engine then at the maximum speed that the testing officer believes that the engine can be safely tested.

4.2.3 A single noise level measurement shall then be made.

4.2.4 The specified procedure shall be repeated until such number of readings, each within a range of 1dB(A), as the person making the tests considers appropriate have been made. For the purposes of this sub-paragraph non-integer decibel readings are to be rounded downwards to the nearest whole decibel.

4.3 Interpretation of Results

4.3.1 Where one microphone position is used the noise level of the vehicle shall be the arithmetic mean of the readings specified in paragraph 4.2.4.

- 4.3.2 When the noise level of the vehicle has been calculated, non-integer results shall be rounded down to the nearest whole decibel.
- 4.3.3 Where more than one microphone position is used the noise level at each microphone position shall be determined as if it were the only one. The noise level of the vehicle shall be the higher or highest noise level so calculated.
- 4.3.4 If the microphone position is less than 1m from the engine compartment of the vehicle the calculated noise level shall be reduced by 2dB(A) unless the provisions of paragraph 4.3.5 have been invoked.
- 4.3.5 Where the mechanical noise of the vehicle (for example engine or transmission noise) can be shown to increase the measured noise level by 2dB(A) or more, special acoustic shielding may be fitted to mask this source so that the test is carried out on the exhaust noise alone. Where such shielding is used the provisions of paragraph 4.3.4 shall not apply.

5. Test Method for In-Service Goods Vehicles and Omnibuses

5.1 Microphone position

- 5.1.1 The microphone shall be directed towards the orifice of the exhaust outlet and shall be supported by a tripod or similar device not providing excessive acoustic reflection. The general requirements for positioning microphones are shown in Figure 1.
- 5.1.2 The nominal axis of maximum sensitivity of the microphone shall be substantially parallel to the test site surface.
- 5.1.3 The height of the microphone above the test site surface shall be equal to that of the orifice of the exhaust outlet ± 25 mm but shall not be less than 200 mm above the test site surface.
- 5.1.4 The distance of the microphone from the orifice of the exhaust outlet shall be 1 050 mm \pm 50 mm.
- 5.1.5 For vehicles fitted with one exhaust outlet which is at a height above the test site surface of less than 1 500 mm, the nominal axis of maximum sensitivity of the microphone shall make an angle of 45 degrees \pm 10 degrees with the principal direction of the gas flow from the exhaust outlet.
- 5.1.5.1 In selecting this microphone position the microphone shall be placed so that the greatest possible distance is achieved between it and the vehicle.
- 5.1.6 For vehicles fitted with one exhaust outlet which is at a height above the test site surface of at least 1 500 mm, the nominal axis of maximum sensitivity of the microphone shall make an angle of 90 degrees \pm 10 degrees with the longitudinal centreline of the vehicle. However, if positioning the microphone according to the preceding requirement would result in the microphone being placed in the gas flow from the exhaust outlet then the microphone location may be rotated, in a horizontal plane, no greater than 45 degrees.

- 5.1.6.1 In selecting this microphone position the microphone shall be placed so that the greatest possible distance is achieved between it and the vehicle.
- 5.1.7 For vehicles fitted with two or more exhaust outlets spaced less than 500 mm apart and connected to a single silencer only one microphone position shall be used. That position shall be selected in accordance with the procedure described in the preceding paragraphs in respect of an exhaust outlet which results in the microphone being at the greatest possible distance from the vehicle.
- 5.1.8 For vehicles fitted with two or more exhaust outlets connected to separate silencers or spaced more than 500 mm apart, each exhaust outlet shall be treated separately as if it were the only one.
- 5.1.9 Notwithstanding anything to the contrary in the preceding paragraphs if the microphone positioning procedures result in no suitable position due to an obstruction being part of the vehicle or in an obstruction being directly between the microphone and the exhaust outlet, the requirements of paragraphs 5.1.2 and 5.1.3 may be varied.

5.2 Vehicle operation and noise measurement

- 5.2.1 The vehicle shall be stationary with the transmission in "neutral" or, in the case of a vehicle with automatic transmission, with the gear selector in the "park" position if such a position is provided.
- 5.2.2 In the case of Goods Vehicles and Omnibuses powered by a Diesel Engine the engine shall be operated in accordance with the following procedure.
- 5.2.2.1 With the engine at idling speed the accelerator pedal of the vehicle shall be depressed as rapidly as possible and kept fully depressed until the speed of the engine is substantially stable at maximum (or governed) speed. The accelerator pedal shall then be permitted to return to its original position as rapidly as possible and left in that position until the engine has returned to idling speed.
- 5.2.2.2 A single noise level measurement shall be made for each microphone position in use by noting the maximum noise level indicated during this procedure.
- 5.2.3 In the case of Goods Vehicles and Omnibuses powered by a spark ignition engine the engine shall be operated in accordance with one of the following procedures.
- 5.2.3.1 Where the ESMP for that engine has been determined by the testing authority, the engine shall be brought to and stabilised at a speed as close to $\frac{3}{4}$ ESMP as the testing officer can achieve; or

- 5.2.3.2 Where the ESMP has not been determined for that engine by the testing authority, then the engine shall be brought to and stabilised at as close as the testing officer can achieve to one of the following speeds:

If the engine has:

- | | | |
|-------|---|-----------|
| (i) | 6 cylinders or more | 3 000 rpm |
| (ii) | 4 cylinders and was manufactured before 1970 | 2 500 rpm |
| (iii) | 4 cylinders and was manufactured in 1970 or later | 3 500 rpm |

OR

- 5.2.3.3 Where, in the opinion of the testing officer, the speed determined by reference to the above is not attainable by the engine then at the maximum speed that the testing officer believes that the engine can be safely tested.

- 5.2.3.4 A single noise level measurement shall then be made.

- 5.2.4 The specified procedure shall be repeated until such number of readings, each within a range of 1dB(A), as the testing officer considers appropriate have been made. For the purposes of this paragraph noninteger decibel readings are to be rounded downwards to the nearest whole decibel.

5.3 Interpretation of results

- 5.3.1 Where one microphone position is used the noise level of the vehicle shall be the arithmetic mean of the readings specified in paragraph 5.2.4.

- 5.3.2 When the noise level of the vehicle has been calculated, non-integer results shall be rounded down to the nearest whole decibel.

- 5.3.3 Where more than one microphone position is used the noise level at each microphone position shall be determined as if it were the only one. The noise level of the vehicle shall be the higher or highest noise level so calculated.

6. Test Method for In-Service Motor Cycles.

6.1 Microphone position

- 6.1.1 The microphone shall be directed towards the orifice of the exhaust outlet and shall be supported by a tripod or similar device not providing excessive acoustic reflection. The general requirements for positioning microphones are shown in Figure 2.

- 6.1.2 The nominal axis of maximum sensitivity of the microphone shall be substantially parallel to the test site surface and shall make an angle of 45 degrees \pm 10 degrees with the principal direction of gas flow from the exhaust.

- 6.1.3 In selecting the 45 degree alignment from the outlet of a motor cycle fitted with two or more outlets, only the angle resulting in the microphone being farthest from any other outlet must be used.
- 6.1.4 The height of the microphone above the test site surface shall be equal to that of the orifice of the exhaust outlet ± 25 mm but shall not be less than 200 mm above the test site surface.
- 6.1.5 The distance of the microphone from the exhaust outlet orifice shall be 525 mm ± 25 mm.
- 6.1.6 For motor cycle fitted with one exhaust outlet the microphone shall be placed so that the greatest possible distance is achieved between it and the contour of the motor cycle.
- 6.1.7 For motor cycles fitted with two or more exhaust outlets spaced less than 500 mm apart only one microphone position shall be used. The microphone position selected shall be in relation to the outlet nearest to the external side of the motor cycle, or when such an outlet does not exist, to the outlet which is the highest above the ground.
- 6.1.8 For motor cycles having exhaust outlets spaced more than 500 mm apart, each exhaust outlet shall be treated separately as if it were the only one.

6.2 Vehicle operation and noise measurement

- 6.2.1 The motor cycle shall be stationary and held in a substantially vertical position.
- 6.2.2 The engine of the motor cycle under test shall be operated in accordance with one of the following procedures:
- 6.2.2.1 Where the ESMP for that engine has been determined by the testing authority, the engine shall be held steady at a speed as close to 50 per cent of ESMP as the testing officer can achieve and then the throttle shall be returned swiftly to the idle position;

OR

- 6.2.2.2 Where the ESMP for that engine has not been determined by the testing authority then the engine shall be brought to and stabilised at a speed as close as the testing officer can achieve to one of the following speeds:

- | | | |

| | • of other origin | 3 000 rpm |

OR

- (iii) Where, in the opinion of the testing officer, the test speed determined by reference to the preceding is not attainable by the engine then at the maximum speed that the testing officer believes that the engine can be safely tested.

and then the throttle shall be returned swiftly to the idle position.

6.2.2.3 A single noise measurement shall then be made by noting the maximum noise level indicated during this procedure.

6.2.3 The specified procedure shall be repeated until such number of readings, each within a range of 1dB(A), as the testing officer considers appropriate have been made. For the purposes of this sub-paragraph non-integer decibel readings are to be rounded downwards to the nearest whole decibel.

6.3 Interpretation of Results

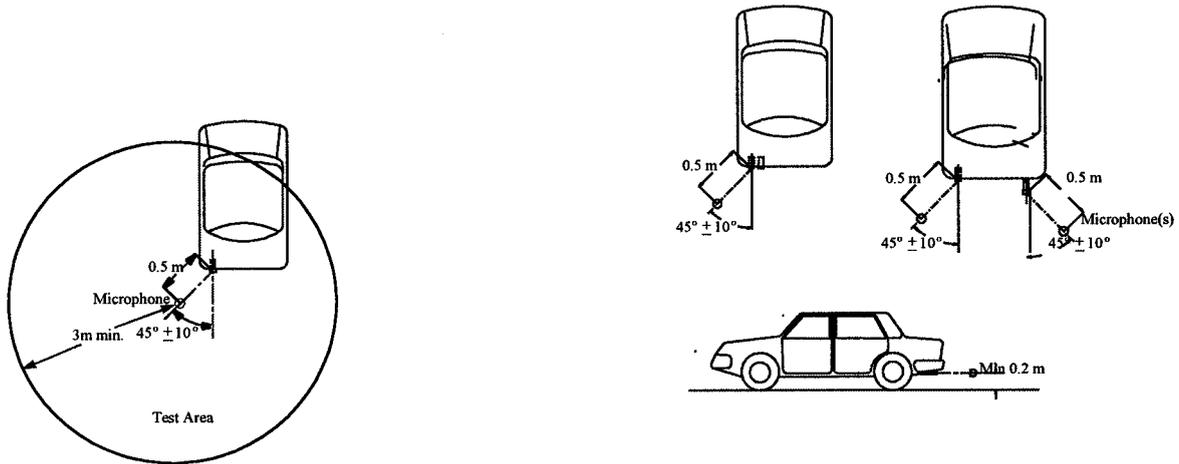

6.3.1 Where one microphone position is used the noise level of the motor cycle shall be the arithmetic mean of the readings specified in paragraph 6.2.3.

6.3.2 When the noise level of the motor cycle has been calculated, non-integer results shall be rounded down to the nearest whole decibel.

6.3.3 Where more than one microphone position is used the noise level at each microphone shall be determined as if it were the only one. The noise level of the motor cycle shall be the higher or highest noise level so calculated.
