Preamble

1. On 18 January 2000 the Minister, by notice in the Gazette (dated 21 January 2000, pages 486 to 495 inclusive), required that certain documentation, as described in the Notice, accompany livestock or livestock products of a certain class en route into the declared Protected Zone for bovine Johne's disease in South Australia.
2. It is now considered appropriate to vary certain conditions within schedule 2 of the Notice in relation to the movement of cattle into the Protected Zone.

EXPLANATORY NOTES

Part A - Completion of this part is required for the declaration to be valid

Only the vendor or a person responsible for the husbandry of the cattle/goats may complete and sign this declaration. If space is insufficient to identify all cattle, attach a signed list.

Making a false or misleading statement about the disease status of cattle/goats for sale is an offence under the Trade Practices Act 1974 and relevant State legislation.

Non-assessed herd means no testing has been done on the herd to determine its JD infection status.

De-sexed cattle under 2 years of age originating from a BJD Control Zone may enter the SA BJD Protected Zone provided they do not originate from a property with a BJD status of Infected, Restricted or Suspect and they are removed from the Protected Zone prior to the eruption of their first adult teeth

Part B CattleMAP/ GoatMAP herds Optional Completion if Applicable

Complete this part only if all cattle/ goats described in Part A are from a herd enrolled in the Australian Johne's Disease Market Assurance Program for Cattle (CattleMAP) or Goats (GoatMAP). The herd status, certificate number and date of expiry *must* be provided.

The MN status of the herd must be indicated on the declaration, and the year in which this status was obtained must be inserted in the appropriate box.

The best assurance for purchasers concerned about Johne's disease is provided by buying cattle/ goats from herds which are participating in the CattleMAP. The higher the MN number, the better this assurance becomes.

Part C Check Tested herds Optional Completion if Applicable

The following is the approved method of herd testing to obtain a Check Tested status for Johne's disease:

- The herd assessment is to be conducted by an Approved Veterinarian and is valid for a period of 12 months from the date of the testing.
- The assessment is only applicable to herds/properties where the owner/veterinarian has no reason to suspect that Johne's disease is present.
- At least 50 adult cattle/goats in the herd are to be selected for testing, following an inspection of the herd by the Approved Veterinarian. The cattle/goats tested must represent the older age groups bred in the herd, and cattle introduced into the herd. Blood samples are to be tested at an approved laboratory using the absorbed ELISA test (cattle) or the ELISA or AGID test (goats). A negative test is one where no reactors are detected, or where all reactors have been subject to two faecal cultures 3-6 months apart, or slaughtered with specimens taken and examined by histopathology and culture at an approved laboratory, with negative results for Johne's disease.

Vendor declarations based on this assessment must only be provided for the sale of cattle/goats which:

- were born and reared on the property; or
- were purchased/introduced with a Declaration of Johne's disease Status for Cattle/Goats.

Note: The negative blood testing of 50 cattle/goats in a particular herd does not ensure that the herd is JD free. Annual testing of 50 different animals in the herd increases the level of confidence that JD is not present in that herd provided negative results are always obtained. Herds allocated *Monitored Negative* status under the CattleMAP or GoatMAP have a higher level of assurance that JD is not present than do herds which are only *Check Tested*.

Part D Individually tested animals from Non-Assessed herds Optional Completion if Applicable

The following criteria must be met for a herd owner to be eligible to complete Part D:

1. The cattle/goats have not, for any period during their lifetime, been in a herd or on a property where Johne's disease was known or suspected to exist.
 - If the BJD status of the property of birth or any subsequent property movements cannot be defined, Part D of the Declaration cannot be certified.
 - Johne's disease may be suspected where it has not been ruled out as a cause of chronic wasting, diarrhoea, or production loss in the herd, or where cattle/goats have been introduced from an Infected herd.
2. The cattle/goats to which the declaration applies have each been assessed for Johne's disease by an approved veterinarian, with negative results, by:
 - ELISA test (cattle) or the ELISA or AGID test (goats) on blood sampled within 70 days of the declaration, OR
 - Culture of faeces sampled within 12 months of the declaration, OR
 - In the case of cattle younger than 2 years or goats younger than 12 months, either of the above tests performed on its dam.

Approval of assessment under Part D for movement of cattle between Zones will cease on 30 June 2000.

Part E DECLARATION

Only the vendor or a person responsible for the husbandry of the cattle/goats may complete and sign this Declaration. Stock agents cannot make this declaration on behalf of clients
