Sediment cores should be a minimum of 50 mm in diameter and 100 mm in depth. Collection of cores should be visible on video transects.

All infauna collections must be preserved in an appropriate medium and labelled (inside and outside) with the date of collection, site location, collection method, and collectors' and identifiers' name. Video transects must be collected using equipment capable of producing a clear and well lit image. Transects must be at least 50 m long and a scale must be clearly visible on the video at all times. The location of video transects must be identified on a map attached to the environmental monitoring report. Each transect must be identified on the video with a unique transect number. The diver should gently disturb the sediment by hand at the start and end of transects to reveal sediment colour beneath the surface.

*Report*
