Environmental Monitoring Program

The monitoring program should address the following matters in relation to the permitted use:

Farm Management

Approximate layout of all structures on the site including location, number and size.

Stocking density of the permitted species held on the site.

Dates and numbers of the permitted species stocked and harvesting on the site.

Occurrence of disease incidents in the permitted species on the site.

Benthic Sediments

Redox potential.

Infauna communities including composition and abundance.

Benthic Fauna and Flora

Benthic macro-flora communities including composition and abundance.

Benthic macro-fauna communities including composition and abundance.

METHODOLOGY

Draft Environmental Monitoring Program

The draft environmental monitoring program needs to detail the site layout and sampling sites, including control sites.

Sediment Cores

Sediment cores should be used to assess the infauna composition and abundance of the sediments. Sediment cores should be 50 mm wide and inserted into the sediments to 150 mm. Samples need to be rinsed through a 1 000 µm mesh. Collection of the cores should be visible on the videos when possible.

Infauna samples must be preserved in Bennett's solution and stained with Thyloxin-B initially. After sorting the samples should be labelled inside and outside the containers with details of the date of collection, site location, collection method, and the collector's and identifier's name. The samples must be preserved in 70% alcohol and kept in storage for two years to allow for auditing or further analysis if required.

Video Transects

Video transects should be used to assess the broad scale changes in sediment consistency, presence of farming waste and the composition and abundance of macro-fauna and macro-flora communities.

Video transects must be collected using equipment capable of producing a clear and well lit image in Hi-8 format for computerised image analysis using a Sony Hi-8 digital camera or equivalent capable of operating at a minimum of 3 lux. The underwater housing must be fitted with a minimum of two 50 W lights. Transects must be at least 150 m long and a transect line marked at 5 m intervals must be visible at all times. The date and 'live' time should also be visible. The location and unique number of each transect must be clearly marked on a map that includes details of the site layout. The diver should gently disturb the sediment by hand at the start, middle and end of each transect to reveal the colour of the sediments below the surface.

Report

The environmental monitoring report must contain a synthesis of the data, statistical analysis and interpretation of the results. All raw data and video footage must also be presented to Aquaculture SA in electronic format and hard copy.

The environmental monitoring report must be legible and contain a declaration regarding the authenticity and source of all data and results contained in the report. This declaration must be signed by the licence holder and the person(s) conducting the monitoring program.

The report must include an assessment of the results of the monitoring program against the provisions of the Environment Protection (Marine) Policy 1994, and must be accompanied by all raw data, video footage and diver notes.

SCHEDULE 6

Schedule of Environmental Monitoring Reports

The licensee must submit an environmental monitoring program report and videos within three months of the commencement of this licence to the Minister, c/o General Manager Aquaculture SA, 14th Floor, 25 Grenfell Street, G.P.O. Box 1625, Adelaide, S.A. 5000, during the term of this licence.

14 February 2002

Stephen Kelly
Managing Director
National Electricity Code Administrator
Level 4, 41 Currie Street
ADELAIDE, S.A. 5000

Dear Stephen

*Applications for Authorisation of Amendments to the National
Electricity Code—Network and Distributed Resources*

In December 2000, the Australian Competition and Consumer Commission (Commission) received applications for authorisation (Nos A90773, A90774 and A90775) of amendments to the National Electricity Code (Code). The proposed amendments to the Code relate to the Network and Distributed Resources package, which deals with the planning and approval provisions for new transmission network augmentations.

Please find enclosed a copy of the Commission's determination in respect of these applications for authorisation. The Commission's determination outlines its analysis and views on the proposed Code changes. The Commission has granted authorisation, conditional upon a number of amendments to the Code changes being made. A list of the conditions is outlined in Chapter 6 of the determination.

In accordance with s.101 of the Trade Practices Act 1974, a person dissatisfied with the Commission's determination may apply to the Australian Competition Tribunal for a review of the determination. Each application must be lodged on the appropriate form within 21 days of the date of the determination, with the Registrar of the Tribunal. The Tribunal is located in the Office of the Registrar of the Federal Court in each State.

A copy of this letter together with the determination will be placed on the Public Register kept by the Commission.

Yours sincerely,

M. RAWSTRON, General Manager, Regulatory
Affairs—Electricity.
