- Letters from Resource Developments Pty Ltd dated 11 July 2003 and 3 September 2003 and Flood and Stormwater Management Plan for the Completed Stage I and II, dated 11 July 2003.

unless varied by the following conditions.

2. No works may be commenced unless and until:

- (a) a private certifier or the Light Regional Council has certified to the Development Assessment Commission that all work that constitutes building work under the Development Act complies with the Building Rules; and
- (b) a Construction Environmental Management Plan (CEMP) to address management issues during construction has been prepared by the proponent to the reasonable satisfaction of the Development Assessment Commission in consultation with the Environment Protection Agency (a branch of the Department for Environment and Heritage).

The matters addressed in the CEMP shall include, but not be limited to:

- dust control during demolition and construction;
- stormwater management during demolition and construction;
- waste water disposal;
- site clean up during demolition and construction;
- disposal of all waste;
- measures for controlling noise impacts from all activities and equipment; and
- hours of work.

3. Prior to the commencement of Stage II a detailed flood and stormwater management plan be prepared to the reasonable satisfaction of the Development Assessment Commission. Such Plan should consider water sensitive water design aspects and 'best practice' measures for progressively treating run-off prior to disposal, such as the use of vegetated swales, retention basins (e.g. ephemeral wetlands), gross pollutant traps, oil/grease traps and silt traps. The disposal of run-off and use of 'treated' water, such as for irrigating landscape/amenity plantings or use in plant processes, should also be addressed. In particular, such plan must include measures to ensure that:

- (a) Development does not increase the flood risk to any other property by provision being made to ensure that stormwater runoff leaving the site post development does not exceed that which would be expected in its natural state for a 100 year ARI flood event.
- (b) Development is designed to adequately manage stormwater by provision being made to ensure that runoff from the site post development is suitably collected, treated and disposed of. This shall be achieved by adopting the following principles:
  - the peak rate of stormwater runoff from the development should not exceed that which would be expected from the site in its natural state for all storms up to and including a 20 year ARI event. This will require runoff detention and storage;
  - the volume of stormwater runoff from the development shall not exceed that which would be expected from the site in its natural state, for all storms up to and including a 20 year ARI event. This will require runoff retention including reuse and/or other means of depletion as may be necessary;
  - provision for stormwater runoff treatment should be incorporated to ensure that all stormwater runoff from the development meets appropriate quality standards.

4. All landscaping indicated on Drawing V627/D/L/1801 shall be established within 6 months of the date of this approval and shall be maintained and nurtured at all times with any diseased or dying plants being replaced.

5. The main vehicle entrance gate adjacent Argent Road is to be moved a sufficient distance inside the property boundary to ensure that there is sufficient space so that no part of any vehicle extends onto the road or road reserve.

6. All carparking areas are to be clearly line marked and numbered within 3 months of the date of this approval.

7. Buildings must be clad in a light colorbond colour, such as 'Marino'.

8. Noise associated with the operation of the proposed development must not exceed an equivalent noise level of 38 dB(A) at any noise sensitive receiver, when measured in accordance with the Environment Protection (Industrial Noise) Policy 1994. This condition shall be achieved for neutral weather conditions.

9. The environmental noise assessment must be repeated by the proponent following final selection of the plant and equipment. The extent and technical details of the noise reduction measures to achieve condition 8 shall be provided with this assessment. The report shall be submitted to the EP Authority for approval prior to construction.

10. An environmental noise assessment associated with the construction phase of the project must be submitted as part of an approved Construction Environment Management Plan (as described in condition 2 (b)). The environmental noise assessment shall identify the noise reduction measures that are reasonable and practicable. The report shall be submitted for approval prior to construction. The relevant content of the assessment must be shown to have been included within an approved construction plan.

11. A particulate monitor must be installed, to the reasonable satisfaction of the Development Assessment Commission in consultation with the Environment Protection Authority, on one of the stacks of each furnace for the purposes of monitoring the level of particulate emissions from the stack.

12. A continuous NO<sub>x</sub> sampler must be installed, to the reasonable satisfaction of the Development Assessment Commission in consultation with the Environment Protection Authority, on one of the stacks of each furnace for the purposes of monitoring the level of NO<sub>x</sub> emissions from the stack. Installation in the recuperative section is recommended, being before ambient air dilution.

13. If the stack NO<sub>x</sub> samplers are installed after the ambient air inlet (not in the recuperative section) then two gas flow velocities (total gas out, furnace gas or ambient air in) must be continuously measured, to determine the dilution factor.

14. On each stack that does not contain the particulate and NO<sub>x</sub> samplers from each furnace, the flow velocity, temperature and pressure must be continuously monitored.

15. The stack monitoring equipment and sampling ports shall be installed in accordance with the Environment Protection Authority 'Monitoring Manual—Emission Testing Methodology for Air Pollution Manual' (1996).

16. During construction, stormwater management must ensure:

- surface stormwater from outside the construction site is diverted around all disturbed areas;
- surface stormwater on the construction site is intercepted and redirected to protect all exposed areas;
- erosion and sediment control structures are installed prior to the commencement of all site disturbance and construction works;
- all stockpiles/spoil heaps are surrounded by a silt fence at the down-slope toe of the stockpile; and
- provision is made on site for the collection and temporary storage of all site debris and waste. Storage facilities used to store waste materials must be located away from all drainage paths to prevent litter and debris from entering the stormwater system, be covered to prevent the entry of stormwater or dispersal by wind, and be sealed to prevent leakage.

17. Areas containing materials such as fuels and chemicals that have the potential to contaminate stormwater must be adequately banded. (This requirement would be satisfied by compliance with Australian Standards (AS3780.8) for storage tank and bund design).

#### NOTES TO THE APPLICANT

The Environment Protection Authority recommended that the attached notes be included in any decision notification that may be issued.

*Licensing Requirements*

The proposed facility will require licensing under the Environment Protection Act 1993. Scheduled activities under the Act (Schedule 1: Activities of Environmental Significance) that would occur as a result of this proposal includes, but may not be limited to:

- 1 (1) Chemical Storage and Warehousing Activities;
- 2 (4) Ceramic works;
- 3 (4) Activities producing Listed Waste;
- 8 (2) Fuel Burning;
- 7 (6) Earthworks Drainage (may be required during the construction phase).

It should be noted that the onus is on the person proposing to undertake an activity of environmental significance to seek an environmental authorisation (works approval and/or license) before undertaking any such activity (Refer to Schedule 1 of the Environment Protection Act 1993).

It is recommended that any license required under the Environment Protection Act be applied for at least six months prior to the planned commencement of commissioning of the plant.

The Environment Protection Authority may attach any relevant conditions to any licence granted under the Environment Protection Act 1993. Licence conditions would include the following, as indicated above:

*Recommended Licence Condition 1:* Noise monitoring shall occur during commissioning and annually thereafter at positions nominated by the EP Authority. The indices  $L_{Amax}$ ,  $L_{Aeq}$  and  $L_{A90}$  shall be measured as a minimum over consecutive 15 minute periods to record at least the equivalent of 7 days of data. Weather conditions sufficient to determine the Pasquill-Gifford stability category shall be recorded for the measurement period. Attended measurements of the above indices shall occur on two separate occasions during the automatic logging night period. The attended measurements shall also include measurements of the indices in the 1/3 Octave band spectrum format. A report summarising the results of the noise monitoring shall be submitted to the nominated EP Authority Licence Co-ordinator within 14 days of completion of the monitoring.

*Recommended Licence Condition 2:* Where noise monitoring indicates that operation of the facility and ancillary equipment exceeds an equivalent noise level of 38 dB(A) when measured and adjusted in accordance with the Environmental Protection (Industrial Noise) Policy 1994, a noise reduction program shall be carried out. The noise reduction program will comprise identification of the responsible noise sources, determination of the reasonable and practicable measures available and implementation of these measures following approval of the report by the EP Authority. An acoustic engineer shall manage the program.

*Recommended Licence Condition 3:* Install aerators on the stormwater ponds if odorous conditions arise. Include the Gutteridge Haskins and Daveys (GHD) Report recommendations as part of the final design of the stormwater ponds, irrigation and landscaping plan. To be dealt with as a condition of licence.

*General Environmental Duty*

The applicant is reminded of its general environmental duty, as required by section 25 of the Environment Protection Act, to take all reasonable and practical measures to ensure that its activities on the whole site, including during construction, do not pollute the environment in a way which causes or which may cause environmental harm.

*Traffic Management*

The applicant is advised to contact Transport SA in regard to proposed transport routes for the delivery of raw materials and the distribution of finished product, so that any possible traffic impacts on the Gawler township and the local road network are satisfactorily addressed and minimised.

Dated 9 September 2003.

Development Assessment Commission

#### **INTRODUCTION**

Regulation 15 of the Private Parking Areas Regulations 2001 ('the Regulations') made pursuant to the Private Parking Areas Act 1986 ('the Act') states:

Acts and regulations may also be viewed on the SA Parliament website: [www.parliament.sa.gov.au/leg/5\\_legislation.shtm](http://www.parliament.sa.gov.au/leg/5_legislation.shtm)

Special attention should be paid to the definition of such terms as 'private access road', 'private parking area', 'private walkway' and other relevant terms contained in section 4 (1) of the Act.

## DEVELOPMENT ACT 1993

*Murray Bridge Residential (Narooma) Plan Amendment Report (PAR)—Draft for Public Exhibition and Agency Consultation*

NOTICE is hereby given that the Rural City of Murray Bridge has prepared a draft Plan Amendment Report to amend the Murray Bridge (RC) Development Plan.

The purpose of the Plan Amendment Report (PAR) is to provide a framework that encourages the future objectives of the Narooma Development Area, Murray Bridge, to be met.

The need for the amendment has arisen due to the significant population growth and associated town centre growth over the past 10 years. Following on from original concept work completed in 1991, Council then decided on a Masterplan to direct development of all kinds across the Town Centre of Murray Bridge in February 2000. This Masterplan identified the Narooma Development Area as a future high quality residential development. It is considered that the current Residential Zone provisions do not provide for appropriate development, which will meet the objectives of council for Narooma. A new zone, the Residential (Narooma) Zone is therefore created. The area affected by the proposed policy changes includes a portion of land contained within the existing Residential Zone and Fringe Zone.

The draft Plan Amendment Report will be available for public inspection at the Council Offices, 2 Seventh Street, Murray Bridge from 1 October 2003 to 27 November 2003. Copies of the Plan Amendment Report can be purchased at the Council offices at \$10 each.

Written submissions regarding the draft amendment will be accepted by the Rural City of Murray Bridge until 4.45 p.m. on 27 November 2003. All submissions should be addressed to Renee Mitchell, Senior Planning Officer, P.O. Box 421, Murray Bridge, S.A. 5253. (Note: Submissions should indicate whether you wish to be heard at the Public Hearing on 5 December 2003). Copies of all written submissions received will be available for inspection by interested persons at the Council offices from 28 November 2003 to 5 December 2003.

A public hearing will be held on 5 December 2003 from 6 p.m. at the Council Committee Room, 2 Seventh Street, Murray Bridge, to enable people to speak to Council's committee in relation to the PAR and submissions.
