CONDITIONS OF APPROVAL

Solid Waste Balefill

1. The work shall be carried out as shown on the plans (Figures 3.1 to 3.9) in the Development Application Report dated 28 November 1997, included with the Development Application dated 2 December 1997, except as varied by these conditions.

3. Unbaled green waste or unbaled construction or demolition waste of appropriate particle sizes may be placed and compacted in any voids unavoidably occurring between bales and the inclined surface of the cells in which those bales are placed to the reasonable satisfaction of the Environment Protection Authority ('the EPA') and in accordance with any applicable requirements of a relevant environmental authorisation.

4. Waste materials received for disposal at the facility need not be shredded before baling where shredding of those materials is not required for the purpose of producing bales of a density and structural integrity that satisfy the applicable requirements of any relevant environmental authorisation.

11. The proponent shall pay all reasonable costs of the detailed design and construction of any public roadworks made necessary by this development. Such works may include the opening and associated left turn deceleration lane from Port Wakefield Road and the upgrading of the entrance to balefill junction to the satisfaction of the Commissioner of Highways.

16. Distance to groundwater requirements shall be as follows:

- Based on groundwater level monitoring results and interpolated highest groundwater levels for Cell 31, including a 0.1 m buffer; the base of the sump shall be at 9.1 m AHD;
- Notwithstanding the above requirement, a minimum separation distance of 2 m between the underside of the lowest portion of the lining system (including the sump area) and the underlying groundwater shall be maintained at all times.

17. Leachate collection and extraction system requirements shall be as follows:

- Leachate removal shall implement a system which accommodates the installation of the pumps at the leachate riser access point.

- Following cell completion and until the entire cell base is covered with a minimum of 1.5 m of waste, a pump with a flow capacity of a minimum of 40 litres per second shall be installed.

- After it can be demonstrated that leachate production has declined to less than 1 litre per second, this pump can be replaced by a pump of lesser flow capacity.

- A back-up pump with the relevant capacity shall be readily available on site at all times.

18. Leachate treatment requirements shall be as follows:

- Leachate may be managed and treated by means of:

- direct extraction into an on-site leachate evaporation pond which shall meet the minimum design specification as follows:
 - composite lining system comprising a 1 m low permeability clay liner with $k < 1 \times 10^{-9}$ m/s compacted to 95% Maximum Dry Density by standard compaction, and a moisture content between 0% and +4% wet of Optimum Moisture Content, overlaid by a 2 mm High Density Polyethylene (HDPE) liner (welded);

- Direct extraction into a suitably designed, temporary on-site storage tank prior to off-site disposal by an EPA licensed vehicle at an EPA licensed Waste Water Treatment Plant or prior to on-site transport to an onsite leachate evaporation pond.

19. Leachate management requirements shall be as follows:

- The head of leachate on the liner shall not exceed 300 mm (excluding the sump) at all times. To facilitate this, the trigger level for leachate extraction out of the leachate sump shall be set at 290 mm.

- In addition to automatic leachate data readings, a manual monitoring probe shall be installed and calibrated to allow for direct readings of the vertical elevation of leachate in the riser pipe and conversion to the maximum leachate head on top of the liner.

- Leachate levels shall be read manually daily and recorded in the on-site operations logbook or as specified otherwise in the EPA licence.

20. Distance between LLCS/LTPR cells and Balefill cells (reference drawing 3307DO3, 18/8/2004) shall be as follows:

- The distance between LLCS/LTPR cells and Balefill cells shall be at a minimum of 5 m, measured between the toe of the LLCS cell structure (that is where the outer surface of the cap of the completed LLCS/LTPR cell joins the outer surface of the underlying clay liner for the same cell) and the cap of the nearest balefill cell (that is where the outer surface of the cap of a completed balefill cell joins the outer surface of the underlying clay liner).

21. Level 1 Supervision requirements shall be as follows:

- The construction of the clay liner of the cell shall be carried out under Level 1 Supervision in accordance with AS 3798-1996, Appendix B.

—The construction of the HDPE liner shall be carried out under the full-time supervision of a suitably qualified geotechnical consultant with experience in the construction and supervision of the construction of HDPE lining systems, quality control procedures and testing.

22. 'As Constructed Report' requirements shall be as follows:

—An 'As Constructed Report' certifying compliance with the approved design for the lining system, including a Construction Quality Assurance Report (CQA) for the HDPE liner and the Level 1 Supervision Report, shall be submitted to the EPA for acceptance prior to the commencement of the receipt and disposal of waste in each cell. No waste shall be received and disposed of prior to written acceptance of the 'As Constructed Report' by the EPA.

23. Coverage of waste requirements shall be as follows:

—All waste shall be covered as soon as reasonable practicable after the receipt of waste and placement in the cell or at close of business on each business day with at least 150 mm of cover material (waste fill or intermediate landfill cover with the restriction to a maximum particle size of 100 mm).

—If a load of particularly odorous material is received at the LLCS/LTPR cell, it shall be covered immediately with a minimum of 150 mm cover material.

—During periods when the LLCS/LTPR cell is not operating, routine monitoring for odorous gases shall be carried out as part of the site monitoring program and may trigger the application of additional cover material.

—Alternative cover materials may be used after the proponent:

- has demonstrated to the EPA that the proposed material and placement method result in an equivalent or better performance compared to the approved material; and
- has received written approval from the EPA prior to the use of alternative materials and placement methods.

24. Groundwater management requirements shall be as follows:

—An additional groundwater well shall be installed west of cell 30 and the first round of groundwater sampling and testing shall be completed at least two weeks prior to commencement of construction of cell 31.

—Groundwater level monitoring shall commence at least two weeks before commencement of construction of cell 31; groundwater levels shall be taken weekly and reported to the EPA monthly (datasheet and graph) or as specified otherwise in the EPA authorisation.

—Four monitoring rounds at three monthly intervals in the first 12 months of operation shall be carried out to establish additional background analyte levels around cell 31.

—Six monthly monitoring rounds shall be undertaken following the completion of the initial 12 months of groundwater monitoring or as specified otherwise in the EPA licence.

—Prior to the commencement of construction of any other cell for the receipt of LLCS/LTPR, the groundwater management and monitoring program shall be reviewed and submitted for EPA approval.

25. Surface Water Management requirements shall be as follows:

—A stormwater management plan shall be developed and submitted for EPA's approval addressing all issues related to the staged construction of LLCS/LTPR cells on-site prior to commencement of construction of cell 31;

—The stormwater management plan shall provide surface water control and management measures for:

- surface water or stormwater runoff that does not interact with the waste material or other operational areas of the site and is considered to be uncontaminated;

- surface water that comes into contact with waste materials or is collected from landfill areas or other operational areas and is considered to be contaminated;

- surface runoff from the final landfill cap which has to be controlled; and

- diversion of surface water runoff from perimeter areas away from the operating cell.

26. Landfill Environmental Management Plan (LEMP) requirements shall be as follows:

—The new section of the LEMP ('Section 17') shall be completed and incorporated in the revised LEMP document.

—The complete revised LEMP document shall be finalised and submitted to the EPA for approval prior to the receipt and disposal of LLCS/LTPR on the premises.

27. A wheel wash with water sprays shall be installed to ensure removal of residues from the wheels and underside of the vehicles transporting low level contaminated soil and liquid treatment plant residues and subject to the provisions in the Building Rules Certification dated 6 April 2006 as specified in conditions 30 and 31 and plans from Katnich Dodd received on 10 April 2006.

Building Rules

28. No part of the Major Development deemed to be building work shall commence until a favourable decision has been notified to the applicant by me or my delegate in respect of the reserved matter referred to in subparagraph (i) in paragraph (a) of the Decision section above.

29. A decision on building rules compliance will only be made after a Building Rules assessment and certification has been undertaken and issued by the District Council of Mallala, or a private certifier, in accordance with the provisions of the Development Act 1993 and after the Minister for Urban Development and Planning receives a copy of all relevant certification documentation, as outlined in Regulation 64 of the Development Regulations 1993, (refer to 'Notes to the Applicant' below for further information).

30. The engineer shall inspect and certify that the proposed fill satisfies the requirements of 'Certified Controlled Fill' in accordance with the Level 1 certification requirements of AS 3798 prior to placement of the reinforcement into the footings.

31. The footing piers shall be fully founded into natural ground where not fully founded into the 'Certified Controlled Fill'.

Notes to the Applicant:

1. To provide additional screening and wildlife habitat the following options could be investigated by the proponent, Council, community and local landowners:

- revegetation of the road reserve along Prime Beach Road, in conjunction with the District Council of Mallala and the community;
- revegetation of the road reserve along Port Wakefield Road, in conjunction with the Department of Transport and Urban Planning (Transport SA) to further reduce views from the eastern direction;
- plantings on private property along fence lines adjoining the site, in conjunction with landowners and the community.

2. All sedimentation basins, evaporation ponds and surface water drainage channels should be suitably located, designed and managed to ensure native vegetation (especially low-lying saltmarsh communities) is not adversely affected by construction activities or groundwater mounding and, if possible, the ecological value enhanced.

3. A comprehensive Pest Plant and Animal Management Plan must be implemented prior to landfill operations commencing, to ensure the site is free of as many pest species as possible from the onset and adequate monitoring and follow-up control should occur, as discussed in the Assessment Report.

4. Whilst not totally within the control of the proponent, monitoring and control programs to reduce the risk of disease transmission between activities in the area may ideally be prepared by adopting a district approach, in co-ordination with the Adelaide Plains Animal and Plant Control Board, Department of Primary Industries and Resources and landowners.

5. To minimise and control any on-site soil erosion (particularly of stockpiled material), a Soil Erosion and Drainage Management Plan (SEDMP) as described in the Environment Protection Agency's 'Stormwater Pollution Prevention Codes of Practice', must be prepared and approved as part of the LEMP, before the site becomes operational.

6. As part of the LEMP, a Surface Water Management Plan must be prepared by the proponent to the satisfaction of the EPA prior to receipt of any waste. The plan should address the collection and management of all on-site surface water (including any contaminated runoff originating from roadways, carparks and hardstands, the vehicle workshop or wheel washing facility) and management of all surface water flows entering the site from land external to the site, in particular to ensure their final discharge does not impact adversely on any downstream wetlands.

7. A monitoring program must be established to record levels of coastal flooding in the western section of the site and if results indicate a significant risk, a review process be undertaken (ideally through any relevant local community consultative committee) to determine whether to proceed with Stage 9.

8. If blasting is required to remove any of the Ripon Calcrete, explosion vibration characteristics and monitoring requirements must be determined in consultation with the Environment Protection Authority and District Council of Mallala, prior to commencement.

9. The Environment Protection Agency must be provided with all additional data concerning the site geology as it becomes available, as this could necessitate minor changes to landfill design or method of operation and the installation of additional groundwater monitoring bores.

10. To enable detailed design of the proposed groundwater protection system, to determine the minimum depth at which the landfill cells should be based and to enable detailed design of the surface water management system, further investigation of groundwater levels and behaviour on the site must be undertaken prior to finalisation of the detailed design of the landfill and preparation of management plans.

11. As part of the LEMP, a detailed Groundwater and Leachate Management Plan must be prepared by the proponent to the satisfaction of the Environment Protection Authority, prior to receipt of any waste. The Plan must demonstrate how the method of hydraulic containment proposed can be practically achieved. Further hydrogeological investigations must be carried out prior to the commencement of any landfill construction in order to fully define the dewatering and groundwater disposal requirements and to provide details of how the cells can be dewatered and

constructed for full hydraulic containment of leachate. In particular, monitoring of watertable levels must commence immediately after the granting of the development authorisation in order that the magnitude of seasonal fluctuations can be fully established prior to construction of the landfill. The Plan may provide for staging of leachate and groundwater management works which may be required as a result of the staging of waste disposal activities upon the site, and should include contingency measures to be implemented in the event of any failure of the leachate management system.

12. A more sustainable after-use for the site that will encourage the regeneration and rehabilitation of natural communities must be considered during future post closure planning.

13. If appropriate with the desired end use to be determined in more detail at a later stage, the entire landform may be planted with appropriate types of native vegetation cover.

14. Determination of interim and post closure land uses of the site, proposed to be undertaken in association with any relevant local community consultative committee, must be undertaken as required by the Environment Protection Authority as part of the LEMP.

15. Pursuant to Development Regulation 64, the applicant is advised that the District Council of Mallala or private certifier conducting a Building Rules assessment is required to:

- (a) provide to the Minister a certification in the form set out in Schedule 12A of the Development Regulations 1993, in relation to the building works in question; and
- (b) to the extent that may be relevant and appropriate:
 - (i) issue a Schedule of Essential Safety Provisions under Division 4 of Part 12;
 - (ii) assign a classification of the building under these regulations; and
 - (iii) ensure that the appropriate levy has been paid under the Construction Industry Training Fund 1993.

Regulation 64 of the Development Regulations 1993, provides further information about the type and quantity of all Building Rules certification documentation for Major Developments required for referral to the Minister for Urban Development and Planning.

16. The District Council of Mallala or private certifier undertaking Building Rules assessments is required to ensure that the assessment and certification are consistent with this provisional development authorisation (including any Conditions or Notes that apply in relation to this provisional development authorisation).

Dated 20 April 2006.

**TREASURER'S
QUARTERLY STATEMENT**

for the

**THREE MONTHS and SIX MONTHS ended on
31 DECEMBER 2005 and 31 DECEMBER 2004**

*Presented by the
Honourable Kevin Foley MP
Treasurer of South Australia*

GOVERNMENT OF SOUTH AUSTRALIA**COMMENTARY TO THE STATEMENT OF THE AMOUNTS CREDITED TO
AND ISSUED FROM THE CONSOLIDATED ACCOUNT FOR THE QUARTERS ENDED
31 DECEMBER 2005 AND 31 DECEMBER 2004*****Receipts****Taxation*

Higher land tax receipts in the first half of 2005-06, compared with the same period a year ago, mainly reflects the earlier timing of land tax payments by the South Australian Housing Trust which paid its land tax liability (\$115.9 million) in the December quarter 2005, compared with the March quarter in 2004.

Payroll tax receipts for the first six months of 2005-06 were higher than for the same period in the previous year mainly reflecting underlying strength in economic conditions impacting on payroll tax.

Stamp duty receipts for the first six months of 2005-06 compared with the same period in 2004-05 are lower reflecting the timing of large share duty transactions in the September quarter 2004 and the abolition of mortgage duty on loan refinancing and on residential loans for owner occupation, which took effect from 1 July 2005. Low levels of debits tax receipts in 2005-06 reflect the abolition of the tax with effect from 1 July 2005, resulting in only residual collections in the September quarter 2005.

Gambling tax receipts were lower in the first half of 2005-06, compared to the same period a year ago, reflecting timing differences in the monthly transfer of casino tax revenues to Consolidated Account.

Royalties

Royalty receipts were lower in the six months to December 2005 compared with the same period in 2004-05 due to the later timing of royalty payments from the Olympic Dam mine and fewer shipments of petroleum liquids.

Commonwealth—General Purpose Grants

GST monthly payments are based on a schedule prepared by the Commonwealth at the commencement of each year. The schedule may be revised later in the year if actual GST collections vary significantly from the original Budget estimate.

Growth in Commonwealth general purpose grants between the first half of 2004-05 and the first half of 2005-06 mainly reflects differences between the years in the monthly pattern of payments by the Commonwealth and is not indicative of underlying GST revenue growth. In addition, an earlier overpayment of \$22 million in transitional assistance was recovered by the Commonwealth in the September quarter 2004. This had the effect of lowering the level of general purpose grants in that quarter.

Commonwealth—Specific Purpose Grants

The increase in the level of Commonwealth Specific Purpose Payments in the first six months of this year, compared with the same period last year, mainly reflects the timing of debt redemption assistance payments by the Commonwealth.

Other Receipts

Other Receipts are higher in the first half of 2005-06 compared with the same period in 2004-05 because of repayments of equity capital contributions from SA Water (\$74.3 million paid in July) in line with the 2005-06 Budget.

Payments

Payments have been made pursuant to the Appropriation Act, passed at the time of the 2005-06 State Budget and in accordance with various Acts for which specific appropriation has been authorised.

Payments made from the Consolidated Account for the first six months of 2005-06 were higher than the same period in 2004-05. This is primarily due to the level of appropriation approved in the 2005 Appropriation Act being greater than the appropriation level included in the 2004 Appropriation Act.

Note

Considerable caution should be exercised in interpreting the quarterly statement of Consolidated Account transactions. Unlike the State budget, which comprises transactions on an accrual basis, the information reflected in the quarterly statements is limited to cash transactions. In addition, the Consolidated Account does not capture all the transactions undertaken by the general government sector (in particular, it does not record receipts to and payments from special deposit accounts). Finally, it should be noted that the timing of receipts and payments could be volatile within a particular year. As a result, apparently significant movements between years may only be due to changes in the timing of receipts and payments, and therefore may not have implications for the underlying budget position.
